EMERGENCY NOTIFICATION SYSTEM (ENS)

ENS is an *Agencywide* Emergency Notification and Accountability System that provides NASA the ability to send messages, both Agency-related and/or Center-related, to you, in the event of an emergency or emerging situation at a NASA facility.

- Notification is via multiple communication devices, (e-mail, text, cellular, or home/office numbers).
- Gives you the ability to respond to notifications and provide your safety status.
- Provides NASA the ability to track and report on your safety, during an event.

It also provides cross-center support; thus enabling another Center to send ENS messages for one Center if the Center is not operational.

ENS is not a system you, as an employee or contractor, will directly access. You will receive notifications from the system and then be asked to respond via email or the web.

We need you to login to NASA's personnel systems and update your contact information.

Civil Service – please update your information in Employee Express. Step-by-step instructions.

Non Civil Service – enter your information into the User Self-Service tools in the Identity Management and Account Exchange (IdMax). Step-by-step instructions.
